

Consumer healthcare case study

High volume precision manufacturing

Problem:

The need for a cold sore dressing manufactured in the UK

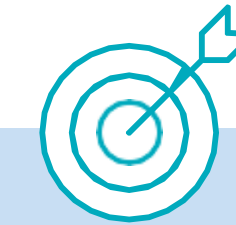

High volume production at low cost

Solution:

To keep cost to a minimum and maximize daily production we designed a process that would enable maximum usage and efficiency of the machine width.

This meant that we could produce to the volumes required (5,000,000/month) and at a highly competitive cost in this market

Result:

Utilizing maximum material efficiency through layout of the products

Enabling product complexity so final users' performance was not reduced but simplifying the design to ensure maximum efficiency
